PROFESSIONAL SUMMARY

Unity developer and technical artist with 10+ years of experience building real-time 3D applications, VR experiences, interactive character systems, and production tooling for immersive media, robotics, and live entertainment. Strong background in Unity and C#, interactive application development, scene integration, rendering workflows, performance optimization, Python tooling, and cross-disciplinary collaboration with artists, designers, and engineers. Hands-on experience shipping for Android, iOS, PC, and Meta Quest/Oculus, with recent work in multiplayer systems using Unity Netcode for GameObjects. Proven ability to contribute across the full development lifecycle, from prototyping and technical problem-solving through optimization, deployment, and production support.

CORE SKILLS

Engines & Development: Unity 6, Unity (C#), Unreal Engine, C++, Blueprints, object-oriented programming

Interactive 3D / VR / AR: VR application development, Meta Quest/Oculus, Android, iOS, PC, AR development, scene integration, physics/gameplay systems, rendering pipelines

Networking & Systems: Multiplayer concepts, Unity Netcode for GameObjects (NGO), client-server fundamentals, real-time application workflows

Tools & Pipeline: Python, PyMEL, Maya tooling, automation, asset validation, batch processing, rendering/review pipelines, technical documentation

Optimization & Collaboration: Performance profiling, asset optimization, legacy project support, cross-functional collaboration, artist/designer support, technical communication, Jira, sprint-based workflows

Version Control: Git, Perforce, Plastic SCM

PROFESSIONAL EXPERIENCE

Super 78 — Technical Artist & Developer

Los Angeles, CA | December 2021 – Present

- Develop real-time interactive applications and production pipelines using Unity (C#) and Unreal Engine (C++/Blueprints) for immersive experiences, VR deliverables, and live character systems.
- Build and maintain rendering, review, and delivery workflows, including Python-based automation for batch processing, file conversion, and standardized output generation.
- Optimize projects for real-time performance and cross-platform deployment, including Meta Quest/Oculus and Android-based workflows.
- Collaborate daily with artists, designers, creative leads, and engineers to translate technical constraints into reliable, shippable solutions.

- Create custom Maya and Python tools to automate asset preparation, export, validation, and production support tasks.
- Troubleshoot and extend legacy projects while supporting new feature development under tight production deadlines.
- Maintain source control workflows across Perforce, Git, and Plastic SCM; support project reliability and collaboration across teams.

Embodied Inc. — Technical Artist

Pasadena, CA | June 2018 – December 2021

- Worked within Jira-based team workflows to track tasks, support cross-functional coordination, and maintain production visibility across engineering, animation, and design.
- Supported development of Moxie, a real-time interactive robot character system, contributing to rigging, asset integration, C# development, and pipeline tooling.
- Developed Python automation tools to improve asset processing, validation, workflow consistency, and iteration speed.
- Worked across engineering, animation, and design teams to align technical implementation with product and creative goals.
- Helped improve asset stability, production efficiency, and mobile graphics performance for a consumer-facing interactive platform.

DeepBlue Worlds — Junior Technical Artist

Los Angeles, CA | February 2014 – June 2018

- Contributed to Unity-based interactive applications and games using C# and Autodesk Maya.
- Supported gameplay integration, asset preparation, character setup, and general real-time production workflows.
- Worked on Android and iOS consumer applications in collaborative production environments.

Mt. San Antonio College — Lab Technician / Teacher Assistant

Walnut, CA | August 2013 – December 2016

- Assisted instruction in Autodesk Maya, introductory modeling, and game-development-related coursework.
- Supported students in creative labs and provided technical guidance on 3D workflows and real-time fundamentals.

SELECTED RELEVANT PROJECTS

Unity Multiplayer Strategy Game — Personal Project

- Designed and developed an online multiplayer turn-based strategy game in Unity 6 for Android and iOS.
- Built gameplay systems in C# using Unity Netcode for GameObjects (NGO), with emphasis on multiplayer architecture, mobile support, and iterative production development.

Client Theater Visualizer — VR Application

- Designed and built a Quest-based VR visualization tool that allowed clients to review media inside accurately scaled virtual theater environments.
- Developed the application in Unity for Android/Meta Quest and created theater geometry and UV workflows in Maya.
- Implemented a user-friendly media loading workflow so non-technical users could review content directly in-headset.

Chimelong Spaceship — Live Unity Character Experience

- Joined late-stage development of a live Unity-based character experience and resolved major technical and performance problems.
- Optimized assets and code, stabilized systems, and improved runtime performance from roughly 13 FPS to above 60 FPS.

Live Character System — Unreal Engine

- Built and maintained a real-time animation system for a live interactive character experience used in a major theme park attraction.
- Developed operator-facing tools inside Unreal Engine and supported a production system requiring reliability, fast response time, and intuitive controls.

Dino on My Desk AR

- Sole developer of an educational AR app for Android and iOS built in Unity with C#.
- Managed gameplay implementation, platform support, Maya-based asset workflows, and Git-based project organization.

TECHNICAL TOOLS

Unity, Unity 6, C#, Unreal Engine, C++, Blueprints, Python, PyMEL, Autodesk Maya, Meta Quest, Oculus, Android, iOS, PC, Unity Netcode for GameObjects, Perforce, Git, Plastic SCM, performance profiling, rendering pipelines, asset optimization, automation tooling

EDUCATION

Mt. San Antonio College — Coursework in Animation, Game Development, and Autodesk Maya
